

14257-SMT parts screw torquing precautions - Slotted and Hex driving means
Steel screws (75C version) and Aluminum screws (90C versions)

When torquing the wire binding screw to the proper amount for the size of wire, all SMT versions using the 14257-SMT staple bus must be protected against lateral forces (90 degrees to the axis of the staple length) when driving the screw which is the weaker plane for the SMT soldered connection to the PCB (the narrow plane of the staple).

Tearing detachment of the SMT soldered joint can occur do to its inherent weakness in that plane.

A universal jointed bit holder, universal joint coupling or universal "wobble" ended extension driver must always be used to apply pure rotational torque and no lateral torque moments.

SEE ALSO IHI GUIDE TO SMT COMPONENTS BEFORE USING SMT COMPONENTS IN DESIGNS

EXTRUSION CAVITY ID MARKS WHEN USED FOLLOW THIS TYPICAL PATTERN ON THE TOP OF THE PART

5/16-24 UNF - 2B

CONNECTOR #B2A ALUMINUM (TIN PLATED)

SCREW #12786SS STAINLESS STEEL INSERTED TO BOTTOM OF WIRE HOLE

PARTS MARKED

- B2
- IHI LOGO
- CSA LOGO
- UL REGOGNITION LOGO
- 2-14CU7
- 2-8AL7
